

BIOCYTOGEN

Extreme Genome Editing (EGE®) CRISPR-based Technology & Applications

Biocytogen LLC. is an established provider of customized gene-targeting models to advance biomedical/life science discoveries. Biocytogen's **Extreme Genome Editing (EGE®)** technology can achieve cKO and large fragment knockins in cell lines and in mice/rats, increasing the recombination efficiency by **10-20 fold**. Biocytogen has also generated a series of immune checkpoint humanized mouse models, as well as B-NDG immune-deficient mice for PDX modeling.

Speaker: Amalia Avila Figueroa PhD, Biocytogen LLC.

Time: Monday, October 23rd, noon-1pm

Location: Tupper Hall Building Rooms 2133/2135
