

iBIO: Integrated Biomedical Sciences Seminar Series

Francis Lin, Ph.D.

Associate Professor

Department of Physics and Astronomy, University of Manitoba

“Exploring Cell Trafficking: Discovery and Applications”

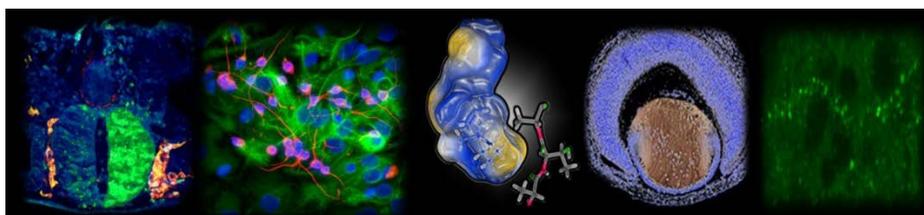

In this talk, I will introduce our work in combining experiments and modeling to understand T cell migration and trafficking in secondary lymphoid tissues, and development of integrated microfluidic systems for cell migration and cell-cell interaction studies. Relevant biomedical applications will also be discussed. In addition, I will introduce our ongoing collaborative research to study collective cell migration and electrotaxis.
