

Traumatic Injury Clinical Trial Evaluating Tranexamic Acid in Children

**Learn about the TIC-TOC trial -
a trauma research study that may affect you
or someone you know.**

*A research trial conducted by
Pediatric Emergency Care Applied Research Network (PECARN)*

What is TXA?

Tranexamic Acid (TXA) is a medicine that helps stop bleeding. The purpose of this research study is to collect information on how well TXA works in severely injured children who are bleeding.

Who will be included?

Children younger than 18 years old with bleeding in inside their bodies or their brains will be included.

How will it affect me or my child?

If you or your child experiences a traumatic injury to the body or brain, he/she may receive TXA or placebo.

Where can I learn more about the study?

Visit our website at www.tictotrial.org to learn more about the trial and ways to opt out. You can also email Kyle Pimenta (kpimenta@ucdavis.edu).
